NETWORK ENGINEER

Highly experienced Network Engineer with 20+ years in the industry, deeply experienced in successful projects across numerous enterprise networks including Verizon, Boeing, State of Washington, AT&T, AmExpress, GM, ADP, Kaiser Permanente, ADM, and EDS.

PROFESSIONAL EXPERIENCE

VERIZON, Seattle WA

Principal Network Engineer

March 2006 to September 2024

Plan, design, implement and test network infrastructure solutions to meet enterprise requirements within healthcare, finance, manufacturing and IT computing environments.

Engineering practices include Datacenter spine/leaf ACI, Routing and Switching, SDWAN, Cloud IAAS, Cloud SAAS, Cloud CAAS, IPS/IPS, Load Balancing, QoS, VoIP, WAN, LAN and WLAN.

CISCO ADVANCED SERVICES

Network Consulting Engineer

January 2006 to March 2006

Provide enterprise network operators with software release management strategies,

as well as leading practices for software test and validation. Provide software defect analysis and remediation recommendations. Provide clients with design and leadership oversight pertaining to architecture and configuration practices across all of Cisco routing and switching products including WAAS, CSM and FWSM services modules.

ADP DEALER SERVICES

Senior Network Engineer

February 2005 to January 2006

Develop standards and configuration templates for consistent network deployments including Traffic Engineering, Traffic Shaping, IPSec VPNs, and route filtering. Plan, design and deploy solutions for network performance/utilization monitoring, configuration management and Authentication-Authorization-

Accounting tools. Provide technical support and guidance to Engineering staff, resolving network problems including frame-relay traffic shaping, CBWFQ, HSRP, policy based routing, GRE and IPSec tunneling, NAT, QoS, VoIP, MPLS and route redistribution. Perform network audits, and present, findings and recommendations to clients.

AT&T BUSINESS

Senior Technology Consultant

September 2002 to February 2005

Principal contributor to the overall MNS Engineering organization. Plan, design, implement and test enterprise networks, managed out of Raleigh, and Tampa.

Responsible for 2000+ sites, including clients such as GM/Saturn, URS Corp, Charles Schwab, Bank of New York, Qualex, and AWW. Technologies include

VoIP, ATM, Frame-Relay, MPLS, x.25, DLSW failover, traffic shaping, CBWFQ, MLPPP Dial Backup, as well as all routing protocols.

Established the pre-sales design review program for GCIES Engineering. Provide network design review for pre-sales deals, reviewing key aspects of the various Managed Network Service offers and cost models. Provide technical support and guidance to Engineering staff, resolving network problems including frame-relay and ATM traffic shaping, CBWFQ, DLSW fail-over, HSRP, policy based routing, ATM IMA, GRE and IPSec tunneling, NAT and route redistribution. Create scripts for calculating FRTS and ATM vbr-nrt configuration parameters in an FRF.8 (ATM to Frame) environment, as well as mass router configs builder.

Perform network audits, assisting assigned Engineers with the implementation of improvement to their

networks. Document and present technical issues and recommendations to lead Engineering Forum, and customer calls. Perform as back-up Engineer for accounts, while the primary engineers are unavailable.

WASHINGTON STATE DEPT. OF CORRECTIONS

Information Technology Specialist 5
(ITSS5)

April 2002 to September 2002

Plan, design and implement high availability enterprise networks, including EtherChannel trunks and Gigabit Ethernet connections on Cisco 6500, 5500 and 3500 stacks, as well as FrameRelay and ATM Wide Area Networks on Cisco and ForeSystems equipment. Implement and monitor security policy on Cisco PIX. Monitor network utilization, using Lucent

VitalNet product. Customize implementation of HP NNM and CiscoWorks2000. Plan, design and monitor WAN bandwidth subscription, implementing policy routing, queuing mechanisms, and traffic shaping. Plan, design and implement remote access for field users, utilizing ISDN PRI, BRI and Analog technologies. Implement TACACS+ AAA via CiscoSecure. Provide technical support to Operations personnel. Document project plans, network standards, and architecture drawings.

DOTCAST Inc.

Network Systems Design Principal
December 2000 to April 2002

Independently plan, design and implement high availability core, distribution and access networks for the “Dotcast Digital Network”, utilizing HSRP, VRRP and

CheckPoint Gateway Cluster. Transport and routing technologies include Frame-Relay, OSPF, BGP and IP multicast technologies for content distribution. Plan, design and implement CheckPoint network security perimeters, with IPSec VPNs, SecuRemote VPNs, and HTTP proxy services. Plan, design and implement network management systems including HP NNM, CiscoWorks2000, CiscoSecure and MRTG. Implement RF communications equipment, for satellite communications MPEG2 data transport, as well as NTSC and ATSC TV transmissions. Document security policy, network standards, and architecture drawings.

INTERNATIONAL NETWORK SERVICES
(AKA Lucent NetworkCare)

Senior Network Systems Consultant
March 1998 to December 2000

Plan, design, implement, troubleshoot and manage large multi-protocol networking environments. Manage network deployment projects, for multiple clients. Such engagements include Washington Mutual, with heavy emphasis on SNA and DLSW in a Cisco environment; Advanced Radio Telecom, with heavy emphasis on VoIP and multicast network solutions, Seattle Public Library, providing network architecture planning and implementation in a Cisco environment; Connexion by Boeing, providing network architecture planning, design and implementation to support new product rollout for mobile networks (airplanes, ships, trains).

THE BOEING COMPANY
Network Design Engineer
June 1996 – March 1998

Design, implement and test multi-protocol distributed computer networks, from initial site survey to final test and production.

Design to customer requirements and network performance data.

Evaluate design alternatives and make equipment/supplier selections.

Develop associated project specifications, presenting recommendations to customers, and interfacing with supplier and Government agency personnel.

Establish project management plans, product delivery schedules, resource estimates, personnel assignments, and product integration requirements.

Review design proposals to ensure enterprise network integrity.

THE BOEING COMPANY
Senior Network Analyst

June 1991 to May 1996

Provide end to end troubleshooting and restoration of Clients, Servers, Gateways, Routers, Etherport Switches, Bridges, High Speed, Low Speed Circuits, Muxes, Terminal Servers, Dialup

Network equipment, Distributed Copper and Fiber Cabling. Upgrade and manage networks for reliability and performance. Work with Network Designers in support of network design changes. Maintain network equipment sparing levels. Install and configure distributed network components to restore service to customer. Support connectivity for external networks. Document processes and procedures to support restoration team. Provide technical support to Technicians.

EDUCATION:

AASE

DeVry Institute of Technology - Phoenix,
AZ,

Presidential Honor Society for Academic
Excellence

- Analog and Digital Circuit Analysis
- Digital Communications and
Networking
- Microprocessor Theory and
Programming

PROFESSIONAL DEVELOPMENT:

San Diego Community College - San Diego
Public Speaking and Technical Writing

INDUSTRY TECHNICAL TRAINING AND CERTIFICATIONS:

- CCIE #5752 (Routing & Switching)
- CCNA (Voice)
- ITIL® Foundation v3

- CVOICE and CIPT, MCSE+I, Cisco ICRC, IMCR, ACRC, CIT, CID, SNAM.

NETWORK OS & MANAGEMENT TOOLS:

- Cisco NX-OS, Cisco IOS, Win2K, UNIX, Linux, VMware ESXi
- Cisco Catalyst SD-WAN Manager, Cisco APIC, Solarwinds, HPOV, Concord, Vital Suites, CiscoWorks, CiscoSecure ACS.
- Sniffer
- AutoCAD, Visio
